Aims
Systems

Vibrations

How

Simulation
types

Classical
simulation

First step

How to write
a report

Atoms vibrate around their equilibrium positions.

- thermal properties: heat capacity, expansion
- phase transitions, including melting
- transport: thermal conductivity, sound
- electrical properties, e.g., superconductivity
- dielectric phenomena at low frequencies

Initial configuration and initial velocities:
the initial configuration will be that of ideal MgO
the velocities will be random but scaled to produce
roughly the target temperature.

- Compute the forces on the atoms (F).
- Compute the accelerations $a = F/m$
- Update the velocities: $V_{\text{new}} = V_{\text{old}} + a * dt$
- Update the positions of the atoms: $R_{\text{new}} = R_{\text{old}} + V_{\text{new}} * dt$
- Repeat until average properties like and settle down
- Once settled measure some properties.

COMP LAB

G. Mallia

Timetable
Deadline

Aims
Systems

Vibrations

How

Simulation
types

Classical
simulation

First step

How to write
a report

Introduction

- the system
- the methodology (theory in use)
- the aims of the exercise
- the tools in use (programs)

Body of the text

- write it like a scientific paper (well-articulated sentences, NOT a list of two-word answers)
- analyse *critically* obtained data and given answers
- round numerical answers to a specific number of decimal places (i.e. 4)
- add literature/web citations whenever a comparison with experimental data is required
- add explicitly every formula used one to obtain results
- check spelling

HOW TO WRITE A REPORT II

by Giulia C. De Fusco

COMP LAB

G. Mallia

Timetable
Deadline

Aims
Systems

Vibrations

How

Simulation
types

Classical
simulation

First step

How to write
a report

Pictures

- max 20
- reasonably sized (NOT one-page sized pictures, but still readable)
- white background (follow the instructions given on the website clicking on the link 'How to save a picture for your report')
- described in caption or in the text

Graphs

- add labels and units
- add a *critical* comment whenever required (NOT a merely descriptive comment)

HOW TO WRITE A REPORT III

by Giulia C. De Fusco

COMP LAB

G. Mallia

Timetable
Deadline

Aims
Systems

Vibrations

How

Simulation
types

Classical
simulation

First step

How to write
a report

Tables

- add labels and units
- round numerical answers to a specific number of decimal places (i.e. 4)
- repeat heading if the table cannot fit in a single page

Conclusions

- give a general description of your calculations and your main findings
- outline the differences between the methods in use and the results obtained
- analyse critically these differences
